Lab 1: Blood

1. What hemoglobin (Hb) levels are you estimating?

2. What is the **unit** used to measure Hb levels?

3. Could your subject be suffering from anemia?

4. What hematocrit did you measure?

5. Is the measured hematocrit within normal levels?

6. What is your blood glucose level you measured?

7. What is the **unit** used to measure blood glucose levels levels?

8. Is the blood glucose level you measured within the normal range and how could it have been influenced by recent intake of food or drink?

9. What is the blood type of the simulated blood you were assigned?
